

A. Test Results: EDI Functional Test (O&P-1)

1.0 Description

The objective of the Electronic Data Interchange (EDI) Functional Test (O&P-1) was to evaluate the functionality of BellSouth's ordering systems in processing Local Service Requests (LSRs) for Unbundled Network Element (UNE) services submitted via EDI.

2.0 Methodology

This section summarizes the test methodology.

2.1 Business Process Description

See Section V, "Ordering & Provisioning Overview" for a description of the BellSouth ordering process via EDI.

2.2 Scenarios

KCI generated and transmitted LSRs based on the 100 UNE scenarios outlined in the *Master Test Plan (MTP)*. The *MTP* defined the EDI order scenarios to be tested in O&P-1, and outlined the specific products and services to be ordered as well as the applicable activity types. The scenarios also defined requirements for the testing of different customer types (business and residential), migration activity (partial and full migration¹) and flow through² designations.

Please refer to Section V, Tables V-2.2 and V-2.3 for a list of the UNE scenarios used for this test.

2.3 Test Targets & Measures

The test target was BellSouth's UNE ordering process for LSRs submitted via the EDI interface. Sub-processes, functions, and evaluation criteria are summarized in the following table. The last column "Test Cross-Reference" indicates where the particular measures are addressed in section 3.1 "Results & Analysis."

¹ A CLEC requests a full migration to convert all of a customer's lines to a new service provider. A CLEC requests a partial migration for a multi-line customer retaining at least one line with BellSouth.

² For electronically submitted LSRs, a flow-through service request proceeds through BellSouth's OSS to generate a FOC without manual intervention. A non-flow-through service request falls out for manual handling prior to generation of a FOC.

Table V-1.1: Test Target Cross-Reference

Sub-Process	Function	Evaluation Criteria	Test Cross-Reference
Submit an Order	Send order in LSR format	Presence of Functionality	O&P-1-1-1; O&P-1-2-1; O&P-1-2-2
	Receive acknowledgment	Timeliness of Response	O&P-1-3-1
	Receive FOC/error/reject notification	Accuracy of Response	O&P-1-4-1; O&P-1-4-2; O&P-1-4-3
		Clarity of Information	O&P-1-4-1; O&P-1-4-2
		Timeliness of Response	O&P-1-3-2a; O&P-1-3-2b; O&P-1-3-3a; O&P-1-3-3b
Send expedited order transaction	Presence of Functionality	O&P-1-1-1; O&P-1-2-1; O&P-1-2-2	
Submit an Error	Send error in LSR format	Presence of Functionality	O&P-1-1-1; O&P-1-2-1; O&P-1-2-2
	Receive acknowledgement	Timeliness of Response	O&P-1-3-1
	Receive planned error/reject notification	Accuracy of Response	O&P-1-4-2
		Clarity of Information	O&P-1-4-2
		Timeliness of Response	O&P-1-3-2a; O&P-1-3-2b
	Correct error(s)	Clarity of Information	O&P-1-4-2
	Re-send order	Presence of Functionality	O&P-1-1-1; O&P-1-2-1; O&P-1-2-2
	Receive FOC	Accuracy of Response	O&P-1-4-1; O&P-1-4-3
		Clarity of Information	O&P-1-4-1
		Timeliness of Response	O&P-1-3-3a; O&P-1-3-3b
Supplement an Order	Send supplement	Presence of Functionality	O&P-1-1-1; O&P-1-2-1; O&P-1-2-2
	Receive acknowledgment	Timeliness of Response	O&P-1-3-1
	Receive FOC/error/reject notification	Accuracy of Response	O&P-1-4-1; O&P-1-4-2; O&P-1-4-3
		Clarity of Information	O&P-1-4-1; O&P-1-4-2
		Timeliness of Response	O&P-1-3-2a; O&P-1-3-2b; O&P-1-3-3a; O&P-1-3-3b
	Correct error(s)	Clarity of Information	O&P-1-4-2
	Re-send supplement	Presence of Functionality	O&P-1-1-1; O&P-1-2-1; O&P-1-2-2
	Receive FOC	Accuracy of Response	O&P-1-4-1; O&P-1-4-3
		Clarity of Information	O&P-1-4-1
Timeliness of Response		O&P-1-3-3a; O&P-1-3-3b	

Sub-Process	Function	Evaluation Criteria	Test Cross-Reference	
Pre-Order/Order Integration	Populate integration orders with information returned from designated pre-order response	Clarity of Information	O&P-2-5-1; O&P-2-5-2; O&P-2-5-3; O&P-2-5-4; O&P-2-5-5; O&P-2-5-6; O&P-2-5-7	
	Submit integration orders	Presence of Functionality	O&P-1-1-1; O&P-1-2-1; O&P-1-2-2	
	Receive acknowledgment	Timeliness of Response	O&P-1-3-1	
	Receive error/reject notification		Accuracy of Response	O&P-1-4-2
			Clarity of Information	O&P-1-4-2
			Timeliness of Response	O&P-1-3-2a; O&P-1-3-2b
	Correct error(s)	Clarity of Information	O&P-1-4-2	
	Re-send integration order	Presence of Functionality	O&P-1-1-1; O&P-1-2-1; O&P-1-2-2	
	Receive FOC		Accuracy of Response	O&P-1-4-1; O&P-1-4-3
			Clarity of Information	O&P-1-4-1
Timeliness of Response			O&P-1-3-3a; O&P-1-3-3b	
Receive Completion Notice (CN)	Receive CN transaction	Accuracy of Response	O&P-1-4-4	
		Clarity of Information	O&P-1-4-4	
		Timeliness of Response	O&P-1-3-4	
Receive Jeopardy Notification	Receive jeopardy notification/ missed appointment transaction	Accuracy of Response	O&P-1-4-5; O&P-1-4-6	
		Clarity of Information	O&P-1-4-5; O&P-1-4-6	
		Timeliness of Response	O&P-1-3-5; O&P-1-3-6	
Check Service Order Status	Check service order status	Accuracy of Response	O&P-1-4-7	
		Clarity of Information	O&P-1-4-7	

2.4 Data Sources

The data collected for this test are summarized in the table below.

Table V-1.2: Data Sources for EDI Functional Test

Expected Results Analysis - EDI	O&P_EDIExpected	O&P-1-A-25	KCI

2.4.1 Data Generation/Volumes

Data for this test were generated through order transaction submission via EDI. The number of transactions submitted during functional testing was determined

based on the number of different requisition and activity (REQ ACT) type combinations available to CLECs via the EDI interface.

This test is a feature function test and did not rely on volume testing.

2.5 Evaluation Methods

To allow for service request submission, BellSouth provided KCI with test bed accounts³ that were provisioned according to KCI's specifications. Test cases and instances, correlating to Local Service Requests (LSRs), were developed using test bed accounts, pre-order data and BellSouth ordering documentation, which included the *Local Exchange Ordering Guide (LEO) Guide, Volume 1*.

Transactions (LSRs) were submitted and the results were logged and compared to expected results, based on our knowledge of the ordering and provisioning system functionality and business processes. These processes are outlined in Section V, "Ordering and Provisioning Overview."

EDI orders were submitted as both stand-alone transactions and as integrated pre-order/order transactions⁴.

2.6 Analysis Methods

The EDI Functional Test included a checklist of evaluation criteria developed by KCI during the initial phase of the BellSouth - Georgia OSS Evaluation. The evaluation criteria provided the framework of norms, standards, and guidelines for the EDI Functional Test.

The Georgia Public Service Commission voted on June 6, 2000 to approve a set of Service Quality Measurement- (SQM-) related measures and standards to be used for purposes of this evaluation⁵. In many cases, results in this section were calculated based on KCI/HP timestamps, which may differ significantly from the BellSouth time measurement points reported in the SQMs.⁶ For those evaluation criteria that do not map to the GPSC-approved measures, or where

³ See Section V, "Ordering & Provisioning Overview" for a detailed description of the Ordering and Provisioning test bed.

⁴ See Section V, "Ordering & Provisioning Overview" for a description of the Pre-Order/Order Integration Sub-Test.

⁵ On January 16, 2001 the GPSC issued an order requiring BellSouth to report for business purposes a set of measures that differs in some cases from the requirements of the June 6, 2000 test standards.

⁶ For one evaluation criterion, O&P-1-3-2a, KCI conducted a comparison of response timeliness based on BellSouth-provided timestamps versus response timeliness based on KCI/HP timestamps. While KCI's evaluation result for this and all other ordering criteria is determined using KCI/HP timestamps and data measurement points, data pertaining to this BLS/KCI data comparison is provided for information purposes. See O&P-1-3-2a for additional information.

BellSouth does not specify and publish a standard business interval for a given procedure, KCI applied its own standard, based on our professional judgment.

For quantitative evaluation criteria where the test result did not meet or exceed the established standard or KCI benchmark, KCI conducted a review to determine whether the differential was statistically significant.

3.0 Results Summary

This section identifies the evaluation criteria and test results.

3.1 Results & Analysis

The results of this test are presented in the table below. Definitions of evaluation criteria, possible results, and exceptions are provided in Section II.

Table V-1.3: Evaluation Criteria and Results

Test Cross-Reference	Evaluation Criteria	Result	Comments
<i>Interface Availability</i>			
O&P-1-1-1	EDI order transaction capability is consistently available during scheduled hours of operation.	No Result Determination Made ⁷	The GPSC approved standard is 99.5% system availability during scheduled hours of operation ⁸ . During the course of this test, Hewlett Packard attempted to maintain a constant connection to BLS's EDI interface by implementing regular system 'pinging.' Based on an analysis of HP's EDI system availability logs between 2/7/00 and 7/27/00 ⁹ , KCI observed that the EDI interface was available during 98.6% of scheduled hours of availability.

⁷ KCI could not conclusively determine the root source (BellSouth or CLEC) for all recorded downtime. As a portion or all of the noted downtime could have resulted from CLEC system downtime, KCI cannot state with confidence that the CLEC recorded result provides evidence of sub-standard performance.

⁸ Regular scheduled hours of availability for the TAG interface are published on the BellSouth Interconnection Web site (www.interconnection.bellsouth.com/oss/oss_hour.html). Notices of specific scheduled system downtime (e.g., for a new system release or fix) are communicated through Carrier Notifications posted on the BellSouth Web site.

⁹ HP maintained detailed logs of system availability beginning on 2/7/00. Comprehensive system availability data for the test period prior to this date is unavailable.

Test Cross-Reference	Evaluation Criteria	Result	Comments
<i>System Functionality</i>			
O&P-1-2-1	The EDI interface provides expected system responses.	Not Satisfied	<p>The KCI standard is 99% of expected system and representative responses received.</p> <p>Of the 863¹⁰ order transactions submitted during the initial Functional Evaluation, nearly 100% received responses (functional acknowledgements, subsequent errors or confirmations, and expected completion notifications) from BLS.</p> <p>During initial testing, some electronically submitted LSRs received responses via facsimile¹¹. According to BLS, these faxes were generated as a result of BLS ordering representative error in failing to populate one of several particular data elements within the BLS service order¹². The missing internal field(s) precluded an electronic response from being generated. On January 15, 2000, BLS implemented a system enhancement to ensure that FOCs and CNs are electronically generated even when an ordering representative fails to enter one of these data elements. Following this system enhancement, KCI did not observe any additional occurrences of missing electronic FOC or CN responses that were attributable to BLS representatives during initial functional testing. See Exception 9 for additional information on this issue. KCI has recommended closure of</p>

¹⁰ This number does not include those transactions receiving interface errors (i.e., those that did not reach BellSouth back-end systems).

¹¹ Less than one percent of total transactions received responses via Fax.

¹² Particular fields include: AECN (on UNE orders); sales code beginning with "YAXQ"; PON; MAN (UNE orders); RESH (Resale orders); and RMKR.

Test Cross-Reference	Evaluation Criteria	Result	Comments
			<p>Exception 9 to the GPSC.</p> <p>KCI initiated a functional re-test on 8/25/00.¹³ During this re-test, KCI failed to receive Completion Notices (CNs) on approximately 14% of transactions for which a CN was expected. For a portion of these orders, BLS indicated that they were mistakenly canceled by BLS service representatives¹⁴.</p> <p>See Exception 118 for additional information on this issue. As no subsequent re-testing activities are planned, KCI has recommended closure of Exception 118 to the GPSC.</p>
O&P-1-2-2	BLS systems and representatives provide required order functionality ¹⁵ .	Satisfied	<p>BLS systems and representatives provided the required order functionality for most transaction types evaluated (see Section V, Tables V-2.2 and V-2.3).</p> <p>However, the following deficiencies in UNE ordering functionality were observed¹⁶:</p> <ul style="list-style-type: none"> — Loop service with directory listing

¹³ This re-test was initiated to address deficiencies identified in other evaluation criteria; however, results were monitored across all relevant evaluation criteria.

¹⁴ According to BLS, some of these orders fell into error status following confirmation (for billing- and directory listing-related errors). A BLS Error Resolution Group, charged with working orders in this error status, mistakenly viewed the KCI Company Codes as belonging to internal BLS test orders and cancelled them out of the system. Additional orders were affected by other service rep errors or cancellations.

¹⁵ A number of ordering scenarios outlined in the *Master Test Plan* are not electronically orderable via BellSouth TCIF 7 interfaces. BellSouth does not allow stand-alone UNE Loop partial migrations or various types of “UNE-to-UNE migrations”, converting a CLEC customer from one service delivery platform (e.g., UNE Loop-Port Combination) to another delivery method (e.g., UNE Loop). KCI issued Exception 39 (UNE Loop partial migration) and Exception 54 (UNE-to-UNE migration) to address these issues. BellSouth submitted requests via the Change Control Process to introduce this ordering functionality into its OSS '99 (TCIF 9) interface release. KCI recommended closure of these exceptions due to the fact that they are not electronically orderable in TCIF 7. Pursuant to the Georgia Public Service Commission’s Order, KCI evaluated the electronically-orderable services in TCIF 7. KCI did not test Issue 9 electronic ordering interfaces in Georgia.

¹⁶ All deficiencies referenced in this criterion were addressed and successfully re-tested. The related exceptions are closed.

Test Cross-Reference	Evaluation Criteria	Result	Comments
			<p>requests require two separate LSRs. BLS has indicated that system modifications to allow loop and directory changes on a single service order are not operationally feasible. To relate the due dates of the two orders, BLS advised CLECs to submit the DL request after the related Loop request has received confirmation, using the Due Date provided on the Loop confirmation as the Desired Due Date for the DL request. KCI submitted a set of Loop Service orders with DL orders to re-test this process. KCI received Firm Order Confirmations on all separate service requests for Loop Service and DL, indicating that BLS ordering systems successfully processed the requests. In addition, KCI experienced no significant problem with obtaining the same confirmed Due Date for DL service as the Due Date received on corresponding Loop Service requests. See Exception 31 for additional information on this issue. Exception 31 is closed¹⁷.</p> <ul style="list-style-type: none"> — On three UNE Loop migration service requests, BLS ordering representatives incorrectly processed the service order, resulting in the disconnection of the customers' retail service without reconnection of the UNE component. BLS instituted a

¹⁷ KCI recommended closure of Exception 31 based on the presence of adequate LS and DL ordering functionality. While BellSouth electronic ordering systems do not have the ability to handle Loop Service with DL orders on a *single* LSR, the basic functionality to process these orders does exist. KCI believes that the additional effort required of CLECs to develop two distinct service requests and to coordinate their Due Dates is not a significant impediment to timely execution of these order types.

¹⁸ WPQTY = White Pages Quantity; YPQTY = Yellow Pages Quantity.

¹⁹ KCI successfully processed LNP orders following implementation of this feature enhancement.

Test Cross-Reference	Evaluation Criteria	Result	Comments
			<p>system edit to prohibit service representatives from improperly coordinating BLS internal service order activity. Following implementation of this system edit, no further instances of inappropriate disconnection activity were noted during initial testing. In addition, KCI executed re-test transactions designed to evaluate this BLS edit. KCI monitored subsequent responses to Loop migration service requests in error status and observed no instances of improper service disconnection. See Exception 22 for additional information on this issue. Exception 22 is closed.</p> <ul style="list-style-type: none"> — A BLS defect preventing the electronic processing of Loop Port Combination partial migration service requests was identified. BLS implemented a system fix on 01/17/00 to correct this deficiency. Subsequent re-testing of this order type indicated that partial migrations are successfully supported. See Exception 4 for additional information on this issue. Exception 4 is closed. — A BLS systems defect preventing the migration of a customer's Billing Telephone Number (BTN) during a partial migration to UNE Loop-Port Combinations was identified. BLS implemented a system fix to address this issue on 4/29/00 and provided CLEC notification of this fix on 5/25/00. See Exception 51 for additional information on this issue. KCI successfully re-tested BTN migrations on 5/30/00. Exception 51 is closed. — A BLS system limitation in

Test Cross-Reference	Evaluation Criteria	Result	Comments
			processing Local Number Portability (LNP) requests (with and without loops) as a result of the WPQTY and YPQTY data elements ¹⁸ was identified. BLS provided notification of an LNP Gateway feature enhancement, implemented on 5/7/00, as well as an interim workaround ¹⁹ via the Change Control distribution process.
<i>Timeliness of Response</i> ²⁰			
O&P-1-3-1	BLS's EDI Interface provides timely Functional Acknowledgements (FAs)	Satisfied ²¹	<p>The KCI standard is 95% of FAs received within 30 minutes.²²</p> <p>LSRs submitted for functional testing received FAs within the following timeframes:</p> <ul style="list-style-type: none"> — 62% of 861 FAs were received in less than 30 minutes. — 23% of FAs were received within 30-60 minutes. — 6% of FAs were received within 60-90 minutes. — The remaining 9% were received after more than 90 minutes. <p>KCI initiated a re-test of FA Timeliness on August 25, 2000. LSRs submitted during re-testing received FAs within the following timeframes²³:</p>

²⁰ During the course of this evaluation, KCI conducted 2 re-tests to address BellSouth performance relative to select 'response timeliness' criteria. The first re-test, initiated on August 25, 2000, was designed to evaluate BellSouth performance following: a) process improvements implemented in the BellSouth ordering centers; and b) the effects of a BellSouth process change within its EDI translator to segregate incoming CLEC transactions from those of other trading partners (completed on June 30, 2000). The second re-test commenced on January 19, 2001, following BellSouth EDI infrastructure changes. A description of the BellSouth EDI infrastructure modifications can be found in BellSouth's Carrier Notification SN91082007. BellSouth also implemented an EDI change *during the course of* the second re-test. On February 2, 2001, BellSouth modified the time intervals for the process consolidating EDI transactions into a single file for pickup by the LEO system. The process was modified to run every 5 minutes (between 6AM-8PM CST) and every 10 minutes (after 8PM and before 6AM); previously, this process ran every 15 minutes. While KCI's evaluation result is determined based on total results for the latest related re-test, data on BellSouth performance after implementation of a mid-test fix is provided for information purposes.

Test Cross-Reference	Evaluation Criteria	Result	Comments
			<ul style="list-style-type: none"> — 93% of 340 FAs were received in less than 30 minutes. — 6% were received within 30-60 minutes. — The remaining 2% were received within 60-90 minutes. <p>See Exception 60 for additional information on this issue. KCI has recommended closure of Exception 60 to the GPSC.</p>
O&P-1-3-2a	BLS's EDI interface provides timely Fully Mechanized (FM) order errors (Fatal Rejects and Auto Clarifications).	Not Satisfied	<p>The GPSC-approved standard for fully mechanized (FM) errors is 97% received within one hour²⁴.</p> <p>LSRs submitted during the entire period of initial functional testing received FM errors within the following timeframes ²⁵ (See Table V-1.5):</p> <ul style="list-style-type: none"> — 18% of FM errors were received in less than one hour. An additional 63% were received within 1-2

²¹ Although the test percentage is below the benchmark of 95%, the statistical evidence is not strong enough to conclude that the performance is below the benchmark with 95% confidence. In other words, the inherent variation in the process is large enough to have produced the substandard result, even with a process that is operating above the benchmark standard. The p-value, which indicates the chance of observing this result when the benchmark is being met, is 0.0584, above the .0500 cutoff for a statistical conclusion of failure.

²² BellSouth documentation does not provide any information on the expected interval for return of an FA.

²³ Totals due not equal 100% due to rounding.

²⁴ Results are based on the actual flow-through status of LSRs submitted by KCI. KCI determined that a clarification was fully mechanized (FM) or partially/non-mechanized (PM) by analyzing BellSouth back-end system data provided to KCI's Flow-Through Evaluation team. KCI also created an algorithm, based on BellSouth Flow-Through definitions, used to obtain actual performance data on KCI-issued service requests. KCI validated the BellSouth-provided data against the KCI-obtained data for consistency in FM/PM classification. During initial testing, KCI was unable to obtain actual FM/PM classifications on a number of Local Number Portability service requests. Responses to 7% of these non-categorized service requests were received within one hour, and 70% were received within 24 hours. During initial re-testing, KCI was unable to obtain actual FM/PM classifications on a number of LNP and non-LNP orders. Of the 30 non-classified orders, 70% were received within 24 hours.

²⁵ On 2/7/00, BellSouth completed a systems and process fix to address timeliness of response issues. For the testing period beginning after the fix implementation, 15% of FM errors were received in less than one hour and 69% of PM errors were received in less than 24 hours.

Test Cross-Reference	Evaluation Criteria	Result	Comments
			<p>hours.</p> <p>KCI initiated a re-test of error response timeliness on August 25, 2000. LSRs submitted during this re-test received FM errors within the following timeframes (See Table V-1.6):</p> <ul style="list-style-type: none"> — 64% of FM errors were received in less than one hour. An additional 33% were received within 2 hours.²⁶ <p>KCI initiated a second re-test of error response timeliness on January 19, 2001. LSRs submitted during this re-test received FM errors within the following timeframes (See Table V-1.7):</p> <ul style="list-style-type: none"> — 84% of FM errors were received in less than one hour. An additional 5% were received within 2 hours.²⁷ <p>See Exception 77 for additional information on this issue. As no subsequent re-testing activities are planned, KCI has recommended closure of Exception 77 to the GPSC.</p>
O&P-1-3-2b	BLS's EDI interface provides timely Partially Mechanized (PM) order clarifications (CLRs).	Satisfied	<p>The GPSC-approved standard for partially mechanized (PM) CLRs is 85% received within 24 hours²⁴.</p> <p>LSRs submitted during the entire period of initial functional testing received PM CLRs within the following timeframes²⁵ (See Table V-1.5):</p> <ul style="list-style-type: none"> — 65% of PM errors were received in less than 24 hours. An additional 30% were received within 24-48

²⁶ KCI conducted an additional review of FM Error Timeliness results for the initial UNE re-test, comparing response timeliness using BellSouth timestamps to response timeliness using KCI/HP timestamps. For all responses classified as "late" using KCI timestamp analysis, BellSouth provided its EDI translator timestamps for the inbound and outbound transactions. Using BellSouth-provided timestamps, 96% of FM ERR/CLR responses received during the first UNE re-test were received one time (i.e., within one hour). See Table V-1.6 for additional information.

²⁷ BellSouth implemented a modification to its EDI systems on 2/2/01 (see Footnote 13 for additional information). 78% of FM errors received via EDI following this fix were delivered within one hour.

Test Cross-Reference	Evaluation Criteria	Result	Comments
			<p>hours.</p> <p>KCI initiated a re-test of error response timeliness on August 25, 2000. LSRs submitted during re-testing received PM CLRs within the following timeframes (See Table V-1.6):</p> <ul style="list-style-type: none"> — 89% of PM errors were received in less than 24 hours. An additional 10% were received within 24-48 hours. <p>See Exception 98 for additional information on this issue. KCI has recommended closure of Exception 98 to the GPSC.</p>
O&P-1-3-3a	BLS's EDI interface provides timely Flow-Through (FT) Firm Order Confirmations (FOCs).	Satisfied	<p>The GPSC-approved standard for flow-through (FT) FOCs is 95% received within three hours²⁸.</p> <p>LSRs submitted during the entire period of initial functional testing received FT FOCs within the following timeframes^{29 30} (See Table V-1.8):</p>

²⁸ Results are based on actual Flow-Through (FT) and Non-Flow-Through (NFT) performance of LSRs submitted by KCI. KCI determined that a FOC was FT or NFT by analyzing BellSouth back-end system data provided to KCI's Flow-Through Evaluation team. KCI also created an algorithm, based on BellSouth Flow-Through definitions, used to obtain actual performance data on KCI-issued service requests. KCI validated the BellSouth-provided data against the KCI-obtained data for consistency in FT/NFT classification. During initial testing, KCI was unable to obtain actual FT/NFT classifications on a number of Local Number Portability (LNP) service requests. Responses to 17% of these non-categorized service requests were received within three hours, and 92% were received within 36 hours. During initial re-testing, KCI was unable to obtain actual FT/NFT classifications on a number of LNP and non-LNP service requests. Of the 40 FOC responses not classified, 35% were received within three hours and 100% were received within 36 hours.

²⁹ Beginning with the February Flow-Through Report, BellSouth no longer categorized as Flow-Through those service requests that proceeded through BellSouth electronic ordering systems to the Service Order Communication System (SOCS) and fell out for manual handling after failing a SOCS edit. Previously categorized as FT, these service request types are now defined by BellSouth to be NFT due to the required manual intervention. As a result of BellSouth Flow-Through calculation modifications, some FT FOCs previously categorized as "late" would be considered *NFT* if submitted in the future. FOC response timeliness re-testing activity (initiated on August 25, 2000) occurred after this FT definition change was implemented. As a result, evaluation of re-test FOC timeliness was performed based on consistent classification of FT or NFT categories.

³⁰ On 2/7/00, BellSouth completed a systems and process fix to address timeliness of response issues. This set of results is provided beginning after the implementation. For the testing period beginning after the

Test Cross-Reference	Evaluation Criteria	Result	Comments
			<p>— 78% of FOCs were received in less than three hours for FT LSRs.</p> <p>KCI initiated a re-test of FOC response timeliness on August 25, 2000. LSRs submitted during this re-test received FT FOCs within the following timeframes (See Table V-1.9):</p> <p>— 82% of FOCs were received in less than three hours for FT LSRs. An additional 13% were received within 24 hours.</p> <p>KCI initiated a second re-test of FOC response timeliness on January 19, 2001. LSRs submitted during the second re-test received FT FOCs within the following timeframes (See Table V-1.10):</p> <p>— 100% of FOCs were received in less than 3 hours for FT FOCs.³¹</p> <p>See Exception 78 for additional information on this issue. The issues in Exception 78 that relate to this criterion are resolved.</p>

fix implementation, 83% of FOCs were received in less than three hours for FT LSRs and 83% of FOCs were received in less than 36 hours for NFT LSRs.

³¹ BellSouth implemented a modification to its EDI systems on 2/2/01 (see Footnote 13 for additional information). 100% of FT FOCs received via EDI following this fix were delivered within three hours.

Test Cross-Reference	Evaluation Criteria	Result	Comments
O&P-1-3-3b	BLS's EDI interface provides timely Non-Flow Through (NFT) Firm Order Confirmations (FOCs).	Satisfied	<p>The GPSC-approved standard for Non Flow-Through (NFT) FOCs is 85% received within 36 hours²⁸.</p> <p>LSRs submitted during the entire period of initial functional testing received NFT FOCs within the following timeframes^{29, 30} (See Table V-1.8):</p> <ul style="list-style-type: none"> — 85% of FOCs were received in less than 36 hours for NFT LSRs. <p>KCI initiated a re-test of FOC response timeliness on August 25, 2000. Exception 97 is closed.</p>

Test Cross-Reference	Evaluation Criteria	Result	Comments
O&P-1-3-4	BLS’s EDI interface provides timely Completion Notifications (CNs) within agreed upon standard intervals.	No Result Determination Made ³²	<p>BLS delivers CNs upon the conclusion of “field provisioning”³³ activities as well as all subsequent downstream (listing and billing) provisioning activities³⁴. Within the CN, BLS provides the field provisioning completion date (located in the ‘DD’ field). BLS does not offer a guideline for the standard interval between field and billing completion activities.</p> <p>LSRs submitted for initial functional testing received CNs within the following timeframes (See Table V-1.11):</p> <ul style="list-style-type: none"> — 86% of CNs were received within one business day after the field provisioning completion date. — 7% received within two business days after field provisioning completion. — 5% received within three-to-five business days after field provisioning completion. — The remaining 2% of CNs were received six or more business days

³² KCI is unable to assign an evaluation result for this criterion and provides the test results as diagnostic information only. Although the GPSC Service Quality Measurement (SQM), ‘Average Completion Notice Interval’ is related to CN delivery and has an associated standard of “Parity with Retail,” KCI is unable to accurately compare its functional transaction results to this SQM within a reasonable degree of accuracy. BLS calculates this metric using the following data points: 1) Completion date and time (as entered by a BLS field technician for dispatched orders or 5pm on the due date for non-dispatched orders); and 2) Date and time of conclusion of all downstream (listing, billing, and, for LNP orders, TN porting) activities. Within the CN response file delivered to CLECs, BLS provides the work completion date (but not the time); BLS does not provide a date/time stamp associated with downstream provisioning completion. While the CN Timeliness results calculated using CLEC data measurement points (and presented in the comment section of this criterion) provide a reasonable representation of the time between receipt of a CN and completion of field provisioning activities, the differences between KCI and BLS calculation points is large enough to prevent an accurate assignment of a Satisfied/Not Satisfied result relative to the SQM standard.

³³ The “field provisioning” date is defined as the date on which actual service completion occurred.

³⁴ For Local Number Portability (LNP) orders, BellSouth returns CNs following all provisioning activities and after the CLEC completes the porting of associated Telephone Numbers with the Number Portability Administration Center (NPAC).

Test Cross-Reference	Evaluation Criteria	Result	Comments
			<p>following field provisioning completion.</p> <p>KCI initiated a re-test of CN response timeliness on August 25, 2000. LSRs submitted during re-testing received CNs within the following timeframes (See Table V-1.12):</p> <ul style="list-style-type: none"> — 87% of CNs were received within one business day after the field provisioning completion date. — 3% received within two business days after field provisioning completion. — 4% received within three-to-five business days after field provisioning completion. — The remaining 6% of CNs were received six or more business days following field provisioning completion. <p>See Exception 26 for additional information on this issue. KCI has recommended closure of Exception 26 to the GPSC.</p>
O&P-1-3-5	BLS's EDI interface provides timely Jeopardy Notifications.	Satisfied	<p>The GPSC-approved standard is 95% of Jeopardy Notifications received at least 48 hours before the confirmed Due Date (DD).</p> <p>Of the nine Jeopardy Notifications received via EDI, BLS has returned 100% at least 48 hours before the DD.</p> <p>See Table V-1.15 for additional details.</p>

Test Cross-Reference	Evaluation Criteria	Result	Comments
O&P-1-3-6	BLS's EDI interface provides timely Missed Appointment (MA) notifications.	Satisfied ³⁵	<p>The KCI standard is 95% of MA notifications received within one business day after the latest confirmed Due Date (DD).</p> <p>Of the 15 MAs received via EDI, BLS has returned:</p> <ul style="list-style-type: none"> – 93% (14/15) within 1 business day after the DD. – 7% (1/15) later than one business -day after the DD³⁶. <p>See Exception 67 for additional information on this issue.³⁷ Exception 67 is closed.</p>
<i>Accuracy of Response</i>			
O&P-1-4-1	BLS systems and representatives provide clear, accurate, and complete Firm Order Confirmations (FOCs).	Satisfied	<p>A sample of FOCs was examined for clarity, accuracy, and completeness relative to the BLS Business Rules (<i>LEO Guide, Volume 1</i>)³⁸.</p> <p>A number of FOCs were received in response to invalid service requests. For these orders, KCI expected to receive error messages. KCI initiated a re-test on 9/25/00 to monitor the</p>

³⁵ Although the test percentage is below the benchmark of 95%, the statistical evidence is not strong enough to conclude that the performance is below the benchmark with 95% confidence. In other words, the inherent variation in the process is large enough to have produced the substandard result, even with a process that is operating above the benchmark standard. The p-value, which indicates the chance of observing this result when the benchmark is being met, is 0.5367, above the .0500 cutoff for a statistical conclusion of failure.

³⁶ The late MA response was received 13 days after the FOC DD.

³⁷ KCI drafted Exception 67 to address late MA notifications received. Upon further investigation, the majority of responses initially categorized as 'late' were determined to be 'on-time'. For a number of PONs, due date modifications were initiated by CLEC representatives during conversations with BellSouth UNE-Center personnel. New FOCs (containing the new Due Dates) are not transmitted in these cases. As a result, KCI initially compared the *original* FOC DD with the MA receipt time. The MA receipt times were subsequently compared to the modified Due Dates. In the majority of cases, the MAs were delivered in a timely manner relative to the new DD.

³⁸ KCI defined an accurate FOC as a correct response type relative to the LSR submitted (i.e., the FOC was received in response to a valid LSR) that contains: a) all expected data elements (fields); b) no unexpected data elements (fields); c) all required data values in the expected format; d) no prohibited values. Expected and prohibited values were developed based on the *LEO Guide, Volume 1*.

Test Cross-Reference	Evaluation Criteria	Result	Comments
			<p>accuracy of FOC responses. KCI determined that 99% of FOCs received during re-test activities were accurate response types (i.e., received in response to valid LSRs).</p> <p>See Exception 95 for additional information on this issue. The issues in Exception 95 that relate to this criterion are resolved.</p> <p>During KCI’s initial review of FOC completeness, KCI observed a number of discrepancies between BLS-documented data requirements and actual data returned on FOC responses. For example, Frame Due Time (FDT) and Circuit ID (ECCKT) were listed as required fields but were not populated on all responses. In addition, CHAN/PAIR was populated when it was not an applicable field according to BLS Business Rules. Exception 68 was opened to address these response completeness issues.</p> <p>To address these issues, BLS published an updated version of <i>LEO Guide, Volume I</i> on August 28, 2000 to more accurately reflect FOC data requirements. This version (7S) did not adequately define usage requirements, by specific order types, for some response fields³⁹. On 1/31/01, BLS issued a modified <i>LEO Guide</i> (Issue 7U) that included additional usage information for response transactions. Based on this updated documentation, KCI validated that all expected data fields were populated on FOC responses.</p> <p>See Exception 68 for additional information on this issue. KCI has</p>

³⁹ The following response fields have inadequate usage requirements: ORD, RORD, FDT, EBD, LOCBAN, BAN1, BAN2. For these fields, KCI was initially unable to determine what the “expected” results should be.

Test Cross-Reference	Evaluation Criteria	Result	Comments
			recommended closure of Exception 68 to the GPSC.

Test Cross-Reference	Evaluation Criteria	Result	Comments
O&P-1-4-2	BLS systems and representatives provide clear, accurate and complete order errors/clarifications (CLRs).	Not Satisfied	<p>A sample of error responses was examined for clarity, accuracy, and completeness relative to the BLS Business Rules (<i>LEO Guide, Volume 1</i>)⁴⁰.</p> <p>A number of CLRs were received in response to valid service requests. BLS performed additional training of its ordering representatives to correct this problem. CLRs received following the implementation of rep training were found to be accurate⁴¹. However, KCI noted additional occurrences of inaccurate CLRs during re-test activities initiated on 9/25/00. Of the sample reviewed, approximately 18% of partially-mechanized CLRs (i.e., issued by BLS representatives) received during re-testing were found to be inaccurate. See Exception 47 for additional information on this issue. As no subsequent re-testing activities are planned, KCI has recommended closure of Exception 47 to the GPSC. In addition, several error messages received in response to Local Number Portability (LNP) service requests did not contain clear and comprehensive error descriptions. These responses were populated with an error message stating “Other LNP Error.” KCI contacted its BLS Customer Service Manager to obtain the detailed error message. BLS has opened a feature change to prevent this message from being delivered on LNP responses. A target date for the implementation of this feature has not yet been</p>

⁴⁰ KCI defined an accurate error as a correct response type relative to the LSR submitted (i.e., the ERR/CLR was received in response to an erred LSR) that contains: a) all expected data elements (fields); b) no unexpected data elements (fields); c) all required data values in the expected format; d) no prohibited values. Expected and prohibited values were developed based on the *LEO Guide, Volume 1*.

⁴¹ Three additional inaccuracies were observed, representing less than 5% of total partially-mechanized CLR responses reviewed following BellSouth rep training.

Test Cross-Reference	Evaluation Criteria	Result	Comments
			<p>established. This deficiency did not prevent KCI from continuing its ordering activity and was not significant enough to affect the overall evaluation.</p> <p>For some initial functional test transactions, a BLS representative generated a CLR in response to a Line Class of Service (LNE CLS SVC) entry on an LSR that had previously returned a system-generated FOC. BLS has proposed a feature enhancement within its internal Change Control Process to ensure system-representative consistency in service request validation. BLS plans to implement this feature in its OSS'99 version of EDI. KCI is not testing OSS '99. See Exception 18 for additional information on this issue. Exception 18 is closed ⁴².</p> <p>During KCI's initial review of error completeness, the BLS Business Rules (Issue 7S) did not adequately define usage requirements, by specific order types, for some response fields⁴³. On 1/31/01, BLS issued a modified <i>LEO Guide</i> (Issue 7U) that included additional usage information for response transactions. Based on this updated documentation, KCI validated that all expected data fields were populated on error responses.</p> <p>See Exception 68 for additional information on this issue. KCI has recommended closure of Exception 68 to the GPSC.</p> <p>This criterion has been assigned a Not</p>

⁴² KCI closed this exception based on the fact that BellSouth has updated its documentation to more clearly reflect the valid data entries in the LNE CLS SVC field, and because the BellSouth feature will not be implemented in TCIF 7. KCI is not testing the ordering functionality of the TCIF 9 release in Georgia.

⁴³ The following response fields have inadequate usage requirements: ORD, RORD, FDT, EBD, LOCBAN, BAN1, BAN2. For these fields, KCI was unable to determine what the “expected” results should be.

Test Cross-Reference	Evaluation Criteria	Result	Comments
			Satisfied as a result of the inaccurate CLR's noted above.

Test Cross-Reference	Evaluation Criteria	Result	Comments
O&P-1-4-3	Service order provisioning due dates (FOC DDs ⁴⁴) identified within BLS's order confirmation delivered through EDI are consistent with the CLEC's valid due date (LSR DDD ⁴⁵) request (e.g., a due date selected in accordance with the product's standard interval or acquired from a Calculate Due Date [CDD] pre-order query).	No Result Determination Made ⁴⁶	<p>KCI obtained valid DDD information for population on an LSR from one of two sources:</p> <ol style="list-style-type: none"> 1) BLS <i>Product and Services Interval Guide</i>. 2) A combination of pre-order queries. KCI performed a Calculate Due Date (CDD) query to determine the earliest possible due date for an order type. An Appointment Availability Query (AAQ) was then run to confirm that the appointment time was available in the necessary Central Office. <p>For LSRs submitted during initial testing and populated with a DDD obtained from BLS documentation⁴⁷:</p> <ul style="list-style-type: none"> — 88% of DDs were equal to the LSR DDD. — 5% of DDs were earlier than the LSR DDD. — 7% of DDs were later than the LSR DDD. <p>For LSRs submitted during initial testing and populated with a DDD</p>

⁴⁴ FOC Due Date (DD) is defined as the due date provided in the FOC. It is the date on which BellSouth commits to complete provisioning of a customer's service.

⁴⁵ LSR Desired Due Date (LSR DDD) is defined as the due date requested in a customer's LSR.

⁴⁶ A Georgia Service Quality Measurement (SQM) addressing the correlation between confirmed due dates and requested due dates does not exist. In addition, BellSouth does not have an established commitment or guideline for the percentage of confirmed due dates that should equal the requested due date. In the absence of an SQM-related benchmark, a BellSouth-defined guideline, or general industry-approved standards or business rule thresholds that can be used for evaluation purposes, KCI provided the test results as diagnostic information only.

⁴⁷ Results are based on 224 LSRs submitted using BellSouth documentation to obtain input for the DDD field.

Test Cross-Reference	Evaluation Criteria	Result	Comments
			<p>obtained from electronic pre-order queries⁴⁸:</p> <ul style="list-style-type: none"> – 90% of DDs were equal to the LSR DDD. – 10% of DDs were earlier than the LSR DDD. <p>BLS implemented training for Local Carrier Service Center (LCSC) representatives on 3/9/00 to prevent earlier DDs from being issued on manually handled service requests. Based on a review of FOCs received after 3/9/00:</p> <ul style="list-style-type: none"> – 9% of DDs were earlier than the requested DDD. <p>KCI initiated a subsequent re-test of Due Date accuracy on August 25, 2000.</p> <p>For LSRs submitted during re-testing and populated with a DDD obtained from BLS documentation⁴⁹:</p> <ul style="list-style-type: none"> – 95% of DDs were equal to the LSR DDD. – 1% of DDs were earlier than the LSR DDD. – 4% of DDs were later than the LSR DDD. <p>For LSRs submitted during re-testing and populated with a DDD obtained from electronic pre-order queries⁵⁰:</p> <ul style="list-style-type: none"> – 88% of DDs were equal to the LSR DDD. – 13% of DDs were later than the LSR DDD.

⁴⁸ Results are based on ten LSRs submitted using electronic pre-order queried to obtain input for the DDD field.

⁴⁹ LSRs for which KCI requested an invalid DDD (i.e., earlier than the documented or pre-order-obtained standard interval) have been excluded from this analysis.

⁵⁰ Totals do not equal 100% due to rounding.

Test Cross-Reference	Evaluation Criteria	Result	Comments
			See Exception 38 and Tables V-1.13 and V-1.14 for additional information on this issue. KCI has recommended closure of Exception 38 to the GPSC.

Test Cross-Reference	Evaluation Criteria	Result	Comments
O&P-1-4-4	BLS systems and representatives provide clear, accurate, and complete Completion Notifications (CNs).	Satisfied	<p>A sample of CNs was examined for clarity, accuracy, and completeness relative to the BLS Business Rules (<i>LEO Guide, Volume 1</i>)⁵¹.</p> <p>The majority of CNs were received in response to completed service requests⁵².</p> <p>During KCI's initial review of CN completeness, KCI observed a number of discrepancies between BLS-documented data requirements and actual data returned on CN responses. For example, Frame Due Time (FDT) and Circuit ID (ECCKT) were listed as required fields but were not populated on all responses. Notes:

(Notes apply to Table V-1.5, Part 1, 2, and 3)

1. Initial test results include data from November 9, 1999 through May 31, 2000.
2. A fully mechanized (FM) response occurs when an electronically submitted LSR receives a clarification generated by BellSouth systems with no manual intervention. FM responses include Fatal Rejects and Auto Clarifications.
3. A partially mechanized (PM) response occurs when an electronically submitted LSR falls out for manual handling and receives a clarification generated by a BellSouth representative. PM responses include LCSC-issued Clarifications.
4. Results are based on the actual performance of LSRs submitted by KCI. KCI determined that a clarification was fully mechanized or partially/non-mechanized by analyzing BellSouth back-end system data provided to KCI's Flow-Through Evaluation team. KCI also created an algorithm, based on BellSouth Flow Through definitions, used to obtain actual performance data on KCI-issued service requests. KCI validated the BellSouth-provided data against the KCI-obtained data for consistency in FM/PM classification.
5. On 2/7/00 BellSouth completed a systems and process fix to address timeliness of response issues. In addition to aggregate results for the entire test period, results for the period beginning after the implementation fix are also presented.
6. Timeliness information pertaining to the LNP service requests for which BellSouth was unable to provide actual FM/PM data is not included in the above table.
7. Calculations are based on business days (i.e., weekends and BellSouth holidays are not counted).
8. The disaggregated breakdown of Clarification timeliness reflects the GPSC's disaggregation levels outlined in the June 6, 2000 – test-specific Service Quality Measurements.
9. Totals may not equal 100% due to rounding.

Notes:

(Notes apply to Table V-1.6, Part 1 and 2)

1. Re-test results reflect data from August 25 through November 15, 2000.
2. Directory Listing disaggregation is provided as supplemental information, to maintain consistency in total counts between Part 1 and Part 2. This category is not required by the GPSC's requested levels of disaggregation.
3. Results are based on actual Fully Mechanized (FM) and partially Mechanized (PM) performance of LSRs submitted by KCI. KCI determined that a ERR/CLR was FM or PM by analyzing BellSouth back-end system data provided to KCI's Flow-Through Evaluation team. KCI also created an algorithm, based on BellSouth Flow-Through definitions, used to obtain actual performance data on KCI-issued service requests. KCI validated the BellSouth-provided data against the KCI-obtained data for consistency in FM/PM classification.
4. Calculations are based on business days (i.e., weekends and BellSouth holidays are not counted).
5. The disaggregated breakdown of Clarification timeliness reflects the GPSC's disaggregation levels outlined in the June 6, 2000 – test-specific Service Quality Measurements.
6. Totals may not equal 100% due to rounding.

**Table V-1.6, Part 3: BellSouth – KCI Timestamp Analysis for Error/Clarification
Timeliness: First Re-test Data**

Description	Average Interval	Range
Difference between KCI timestamp for “LSR Sent” and BellSouth timestamp for “LSR Received”	17 minutes	5 to 48 minutes
Difference between KCI timestamp for “Error Received” and BellSouth timestamp for “Error Sent”	7 minutes	0 to 144 minutes

FM Error Timeliness Results Using BellSouth Timestamps			FM Error Timeliness Results Using KCI Timestamps		
Total Responses	Responses On Time	% On Time (< 1 hr)	Total Responses	Responses On Time	% On Time (<1 hr)
114	109	96%	118	76	64%

Notes:

1. KCI “LSR Sent” and “Error Received” timestamps reflect the point at which the transaction was sent from, or received by, the KCI/HP EDI Interface Gateway.
2. BellSouth “LSR Received” and “Error Sent” timestamps reflect the time at which the inbound LSR or outbound ERR/CLR transaction was processed by the BellSouth EDI translator.
3. Interval calculations were performed on those transactions categorized as “late” based on KCI timestamp analysis.
4. Total responses reviewed using KCI timestamps exceeds total responses reviewed using BellSouth timestamps due to the inclusion of several additional responses that were not classified as Fully Mechanized at the time of the initial BellSouth review.

Notes:

(Notes apply to Table V-1.9, Part 1 and 2)

1. First re-test results reflect data from August 25 through November 15, 2000.
2. Directory Listing disaggregation is provided as supplemental information, to maintain consistency in total counts between Part 1 and Part 2. This category is not required by the GPSC's requested levels of disaggregation.
3. Results are based on actual Flow-Through (FT) and Non-Flow-Through (NFT) performance of LSRs submitted by KCI. KCI determined that a FOC was FT or NFT by analyzing BellSouth back-end system data provided to KCI's Flow-Through Evaluation team. KCI also created an algorithm, based on BellSouth Flow-Through definitions, used to obtain actual performance data on KCI-issued service requests. KCI validated the BellSouth-provided data against the KCI-obtained data for consistency in FT/NFT classification.
4. 'Discrepancies' refer to those orders for which KCI was unable to obtain actual FT/NFT classifications from BellSouth.
5. Calculations are based on business days (i.e., weekends and BellSouth holidays are not counted).
6. The disaggregated breakdown of FOC timeliness reflects the GPSC's disaggregation levels outlined in the June 6, 2000 – test-specific Service Quality Measurements.
7. Totals may not equal 100% due to rounding.

Notes:

(Notes apply to Table V-1.10, Parts 1 and 2)

1. Second re-test results reflect data from January 19 through February 27, 2001.
2. Results are based on actual Flow-Through (FT) performance of LSRs submitted by KCI. KCI determined that a FOC was FT by analyzing BellSouth back-end system data provided to KCI's Flow-Through Evaluation team. KCI also created an algorithm, based on BellSouth Flow-Through definitions, used to obtain actual performance data on KCI-issued service requests. KCI validated the BellSouth-provided data against the KCI-obtained data for consistency in FT classification.
3. Calculations are based on business days (i.e., weekends and BellSouth holidays are not counted).

4. The disaggregated breakdown of FOC timeliness reflects the GPSC's disaggregation levels outlined in the June 6, 2000 - test-specific Service Quality Measurements.
5. Totals may not equal 100% due to rounding.

Table V-1.11, Part 1: Completion Notice Due Date (CN DD) vs. Completion Notification Delivery Date – Initial Test Data

	TOTAL		Flow-Through					
	CNs Received	% of Total CN	Flow-Through ¹	% Flow-Through ²	% of Total Flow-Through ³	Non-Flow Through ⁴	% Non-Flow-Through ⁵	% of Total Non-Flow-Through ⁶
CN Date Received = CN DD	126	76%	28	22%	85%	84	67%	70%
CN Date Received = CN DD + 1 day	16	10%	2	13%	6%	14	88%	12%
CN Date Received = CN DD + 2 days	11	7%	2	18%	6%	9	82%	8%
CN Date Received = CN DD + 3-5 days	9	5%	1	11%	3%	8	89%	7%
CN Date Received = CN DD + >=6 days	4	2%	0	0%	0%	4	100%	3%
TOTAL	166	100%	33		100%	119		100%

Notes:

1. Initial test results reflect data from November 9, 2000 through May 31, 2000.
2. Flow-Through = The number of CNs received within the specified timeframe that were Flow - Through LSRs.
3. % Flow-Through = The percentage of CNs received within the specified timeframe that were Flow-Through LSRs.
4. % of Total Flow Through = The percentage of total Flow-Through LSRs that received CNs within the specified timeframe.
5. Non-Flow-Through = The number of CNs received within the specified timeframe that were Non-Flow-Through LSRs.
6. % Non-Flow-Through = The percentage of CNs received within the specified timeframe that were Non-Flow-Through LSRs.
7. % of Total Non-Flow Through = The percentage of total Non-Flow-Through LSRs that received CNs within the specified timeframe.
8. Results are based on actual Flow-Through (FT) and Non-Flow-Through (NFT) performance of LSRs submitted by KCI. KCI determined that a FOC was FT or NFT by analyzing BellSouth back-end system data provided to KCI's Flow-Through Evaluation team. KCI also created an algorithm, based on BellSouth Flow-Through definitions, used to obtain actual performance data on KCI-issued service requests. KCI validated the BellSouth-provided data against the KCI-obtained data for consistency in FT/NFT classification.

9. CN Timeliness information pertaining to the LNP service requests for which BellSouth was unable to provide actual FT/NFT data is included in the above table. However, the FT-specific detail is not included. As a result, the Total CNs Received will not equal the sum of FT Received and NFT Received columns.
10. Totals may not equal 100% due to rounding.
11. Calculations are based on business days (i.e., weekends and BellSouth holidays are not counted).

Table V-1.11, Part 2: Completion Notice Due Date (CN DD) vs. Completion Notification Delivery Date – Initial Test Data

	TOTAL		Product Delivery Analysis														
	CNs Received	% of Total CNs	No. of Loops ¹	Loops as a % of CNs Received ²	% of Total Loops ³	No. of Ports ¹	Ports as a % of CNs Received ²	% of Total Ports ³	No. Of Combos ¹	Combos as a % of CNs Received ²	% of Total Combos ³	No. NP ¹	NP as a % of CNs Received ²	% of Total NP ³	No. DL ¹	NP as a % of CNs Received ²	% of Total DL ³
CN Date Received = CN DD	126	76%	32	25%	80%	18	14%	67%	36	29%	78%	17	13%	59%	23	18%	96%

CN Date Received = CN DD + 3-5 days	9	5%	1	11%	3%	5	56%	19%	2	22%	4%	1	11%	3%	0	0%	0%
CN Date Received = CN DD + >=6 days	4	2%	1	25%	3%	0	0%	0%	2	50%	4%	1	25%	3%	0	0%	0%
TOTAL	166	100%	40		100	27		100	46		100	29		100	24		100

Notes:

1. The number of CNs by product type (Loop, Port, Port-Loop Combo, Number Portability, Directory Listing) that received LSRs within the specified timeframe.
2. The percentage of CNs by product type (Loop, Port, Port-Loop Combo, Number Portability, Directory Listing) that received LSRs within the specified timeframe.
3. The percentage of Total LSRs by product type (Loop, Port, Port-Loop Combo, Number Portability, Directory Listing) that were received within the specified timeframe.
4. Calculations are based on business days (i.e. weekends and BellSouth holidays are not counted).
5. Loop with Number Portability LSRs are included in the NP column.
6. Totals may not equal 100% due to rounding.

Table V-1.12, Part 1: Completion Notice Due Date (CN DD) vs. Completion Notification Delivery Date - Re-test Data

	TOTAL		Flow-Through					
	CNs Received	% of Total CN	Flow-Through ¹	% Flow-Through ²	% of Total Flow-Through ³	Non-Flow-Through ⁴	% Non-Flow-Through ⁵	% of Total Non-Flow-Through ⁶
CN Date Received = CN DD	48	71%	14	29%	78%	34	71%	68%
CN Date Received = CN DD + 1 day	11	16%	2	18%	11%	9	82%	18%
CN Date Received = CN DD + 2 days	2	3%	1	50%	6%	1	50%	2%
CN Date Received = CN DD + 3-5 days	3	4%	1	33%	6%	2	67%	4%
CN Date Received = CN DD + >=6 days	4	6%	0	0%	0%	4	100%	8%
TOTAL	68	100%	18		100%	50		100%

Notes:

1. Re-test results reflect data from August 25 through November 15, 2000.
2. Flow-Through = The number of CNs received on within the specified timeframe that were Flow-Through LSRs.
3. % Flow-Through = The percentage of CNs received within the specified timeframe that were Flow-Through LSRs.
4. % of Total Flow-Through = The percentage of total Flow-Through LSRs that received CNs within the specified timeframe.
5. Non-Flow-Through = The number of CNs received within the specified timeframe that were Non-Flow-Through LSRs. Note: 2 CNs had no actual Non-Flow-Through indicator. Since these orders were EXPECTED to be Non-Flow Through, they were included in the Non-Flow-Through counts.
6. % Non-Flow-Through = The percentage of CNs received within the specified timeframe that were Non Flow Through LSRs.
7. % of Total Non-Flow-Through = The percentage of total Non-Flow-Through LSRs that received CNs within the specified timeframe.
8. Results are based on actual Flow-Through (FT) and Non-Flow-Through (NFT) performance of LSRs submitted by KCI. KCI determined that a FOC was FT or NFT by analyzing BLS back-end system data provided to KCI's Flow-Through Evaluation team. KCI also created an algorithm, based on BellSouth Flow Through definitions, used to obtain actual performance data on KCI-issued service requests. KCI validated the BellSouth-provided data against the KCI-obtained data for consistency in FT/NFT classification.
9. CN Timeliness information pertaining to the LNP service requests for which BellSouth was unable to provide actual FT/NFT data is included in the above table. However, the FT-specific

detail is not included. As a result, the Total CNs Received will not equal the sum of FT Received and NFT Received columns.

10. Calculations are based on business days (i.e., weekends and BellSouth holidays are not counted).
11. Totals may not equal 100% due to rounding.

Table V-1.12, Part 2: Completion Notice Due Date (CN DD) vs. Completion Notification Delivery Date

	TOTAL		Product Delivery Analysis														
	CNs Received	% of Total CNs	No. of Loops ¹	Loops as a % of CNs Received ²	% of Total Loops ³	No. of Ports ¹	Ports as a % of CNs Received ²	% of Total Ports ³	No. Of Combos ¹	Combos as a % of CNs Received ²	% of Total Combos ³	No. NP ¹	NP as a % of CNs Received ²	% of Total NP ³	No. DL ¹	DL as a % of CNs Received ²	% of Total DL ³

Notes:

1. Calculations are based on business days (i.e., weekends and BellSouth holidays are not counted).
2. KCI has included the following service order types in the “UNE Other” category: UNE Port; UNE Stand Alone Directory Listing; and UNE Stand Alone Number Portability.

⁶⁰ Disaggregation levels in the above table reflect the GPSC-approved 6/6/00 Service Quality Measurements (SQMs) for use in this test.

Table V-1.16: Pre-Order - Order Integration Test Results

Pre-Order Response			Order Form		Comments
Form Name	Field Name	Format	Field Name	Format	
SAQ					
1.	USOC	5 A/N Characters	FEATURE	3-6 A/N Characters	The pre-order response returns the USOC data in the correct format to populate an order form. However, the corresponding field name in the PS order form is FEATURE.
2.	CLLI	11 A/N Characters	LST	11 A/N Characters	The pre-order response returns the CLLI data in the correct format to populate an order form. However, the corresponding field name in the LSR order form is LST.
3.	CIC	4 Numeric Characters	PIC/LPIC	4 A/N Characters	The pre-order response returns the PIC/LPIC data in the correct format to populate an order form. However, the RS order form has two fields, PIC and LPIC. There is no notation on the pre-order form indicating whether the number returned is the PIC or LPIC.
AVQ					
1.	HOUSE- NUM THOROUGH HFARE STREET- NAME 1 STREET- SUFFIX	13 A/N Characters 35 A/N Characters 44 A/N Characters 4 A/N Characters	EU-STREET 1	35 A/N Characters	The order field EU-STREET 1 is constructed by concatenating the four fields from the pre-order query. The combined length of the four pre-order fields could exceed the maximum length of the order field.
2.	CITY	32 A/N Characters	EU-CITY	25 A/N Characters	The pre-order response returns the data in the correct format. However, the field name is different on the order form. The pre-order response could exceed the size limitation of the EU-CITY field on the order form.

Pre-Order Response			Order Form		Comments
Form Name	Field Name	Format	Field Name	Format	
3.	STATE	2 Alpha Characters	EU-STATE	2 Alpha Characters	The pre-order response returns the data in the correct format. However, the field name is different on the order form.
4.	ZIPCODE	5 Numeric Characters	EU-ZIPCODE	5 Numeric Characters	The pre-order response does not return any data that can be used for the EU-ZIPCODE field on the order form. Therefore, an error was returned when submitting an order with this field left blank.
5.	FLR	14 A/N Characters	EU-FLOOR	12 A/N Characters	The pre-order returns the data in an incorrect format. The response added the FLR abbreviation to the data. The field name is also different on the order form. The pre-order response could exceed the size limitation of the EU-FLOOR field on the order form.
AAQ					
1.	COAVAIL DAYS	Mon-Sun (Y or N) XXXXXXX	DDD	YYMMDD	The pre-order response returned the data in Y or N form, specifying the days of the week available to perform service. The response is incompatible with the field DDD on the order form which requires Year, Month, and Date numerals.
2.	COAVAIL DAYS	Mon-Sun (Y or N) XXXXXXX	DDDO-CC	CC	The pre-order response returned the data in Y or N form, specifying the days of the week available to perform service. The response is incompatible with the field DDDO-CC order form, which requires two Century numerals.
CDD					
1.	CDD	CCYYMMDD	DDD DDDO-C	YYMMDD	The pre-order response returned the data in the form Century, Century, Year, Year, Month, Month, and Day, Day. The response is inconsistent with the order form requirement, which splits the date into two fields.

Pre-Order Response			Order Form		Comments

AVQ-TN					
1.	HOUSE- NUM THOROUGHFARE STREET- NAME 1 STREET SUFFIX	13 A/N Characters 10 A/N Characters 44 A/N Characters 4 A/N Characters	EU-STREET 1	35 A/N Characters	The order field EU-STREET 1 is constructed by concatenating the four fields from the pre-order query. The combined length of the four pre-order fields could exceed the maximum length of the order field.
2.	CITY	32 A/N Characters	EU-CITY	25 A/N Characters	The pre-order response returns the data in the correct format. However, the field name is different on the order form. The pre-order response could exceed the size limitation of the EU-CITY field on the order form.
3.	STATE	2 Alpha Characters	EU-STATE	2 Alpha Characters	The pre-order response returns the data in the correct format. However, the field name is different on the order form.
4.	UNIT- ROOM	RM 14 A/N Characters	EU-ROOM	9 A/N Characters	The pre-order response returns the data in an incorrect format. The response added the RM abbreviation to the data. The field name is also different on the order form. The pre-order response could exceed the size limitation of the EU-ROOM field on the order form field.
5.	ELEV- FLOOR	FLR 14 A/N Characters	EU-FLOOR	12 A/N Characters	The pre-order returns the data in an incorrect format. The response added the FLR abbreviation to the data. The field name is also different on the order form. The pre-order response could exceed the size limitation of the EU-FLOOR field on the order form.
